

BSc Thesis Progress Report #1

Name: Jerzy Rzeszutkowski

Student ID: 14912473

Which issues did you face in your research and writing, and how did you solve them?

So far, I managed to narrow down my topic, prepare a sample structure for the thesis. I started the research phase and writing methodology. The main issue I faced, was to understand the basic ideas related to my thesis and BeforeIT.jl and SBI (python) packages documentation. The papers provided by the supervisor helped to get through the material. Combined with explanations by GenAI for more difficult concepts, it gave me enough understanding to start my research.

What are your next steps in your thesis work, and what help do you need?

My next steps are to finish / refine the methodology according to the structure and start writing the literature review part. Then, I will start coding the actual simulation and connecting Julia with Python packages, to get first useful coding examples working. I might need help in specifying the correct methodology, and structuring the thesis.

What feedback have you received on your thesis so far, and how have you used it to improve your work?

As this is the first report, I have not yet asked for nor received significant feedback. We had one informal meeting with our group and supervisor, during which we discussed the topics and set up, coding environments (Julia with BeforeIT.jl package + sbi package from python).
