

BSc Thesis Progress Report #3

Name: Jerzy Rzeszutkowski

Student ID: 14912473

Which issues did you face in your research and writing, and how did you solve them?

My main issues were related to the coding part. As for the research and writing. I have finished the literature review and methodology some time ago. It was not easy at the beginning to understand the ideas in the articles and construct a sensible plan for the writing. Especially that most of the ideas and tools were not covered or introduced during university courses. However, I gained understanding by playing around with tools for sample problems, asking AI for explanations and debugging the main code. AI also helped with creation of the plan, but only for the main structure. When I began writing and reading more articles, the structure became clearer. Also, I was marking points where I wanted to add more points

What are your next steps in your thesis work, and what help do you need?

Currently I am debugging last parts of the code. The main loop, validation and forecasting work, but for smaller samples. To obtain full results I need to iron out issues with Python's serialization and let the code run for 10+ hours. The help is need is to validate that the steps / choices I made so far are sensible and there is not a major problem in the pipeline. After the results are ready (today / tomorrow) I will begin the last part of writing.

What feedback have you received on your thesis so far, and how have you used it to improve your work?

Well, so far the feedback was minimal. I didn't have the literature, nor methodology completely ready by the second meeting, also there were some changes to them. I asked for some specific implementation details (calibration / training periods) and implemented the suggestions.
