

BSc Thesis Progress Report #2

Name: Jerzy Rzeszutkowski

Student ID: 14912473

Which issues did you face in your research and writing, and how did you solve them?

I have configured the Julia + Python environment and I am half – way through my literature review and updating methodology. As of now, I am mainly working on configuring the posterior estimation technique: choosing parameters to estimate, looking for robust summary statistics, NPE methods; because on the first tries, I get quite bad predictions – the GDP goes significantly down. For the Julia + Python, I relied on documentation for packages: BeforeIT, JuliaCall and my knowledge of programming languages. For the literature review, I used Perplexity and ChatGPT to look for paper and summarizing ideas, but I wrote everything myself.

What are your next steps in your thesis work, and what help do you need?

My next step is to narrow down the parameters (I am aiming for 3 – 5), and I am running tests, to find the richest combinations. Moreover, I need to finish the literature review and document / explain the modelling choices. I might ask for some ideas, how to refine the summary statistics, so far I have 4 / 5, but maybe I need to change the direction slightly. Also, I need to ask about the parameter set, whether it makes sense to estimate the ones I chose using SBI.

What feedback have you received on your thesis so far, and how have you used it to improve your work?

So far, I mainly worked on making the environment work and didn't ask about more specific questions about the choices. But after one, I managed to validate one of the core assumptions and find data to compare it with.
